

# Automatic Question Paper Generator

## 1. INTRODUCTION:

In today's world, time is a major concern. Any product that can effectively reduce time and power consumption is accepted and appreciated. Thus we are presenting an Automated Question Paper Generator System that can reduce time consumption by replacing the conventional method of question paper generation system. It also needs lesser man power. We have implemented a role-based hierarchy which restricts access to the users. The system also deploys security mechanisms that prohibit duplication of question papers. There are provisions to enter and edit data suitable to any educational organization with complete freedom for specifying courses, semesters, syllabus and pattern. This enables an educational institute to generate question ensuring security and non-repetitiveness of question papers and is a boon for organizations with limited staff and resources. Our system aims to provide fast operations, data storage and high security for all its tasks. The Question Paper Generator system automatically generates paper, prepares doc file as per selected paper format. After this question paper is converted to pdf file.

## 2. Purpose

The main purpose of the project on Automatic Question Paper Generator is to manage the details of Branch, Course, Question, and Semester. It manages all the information about Branch, Subject, and Semester.

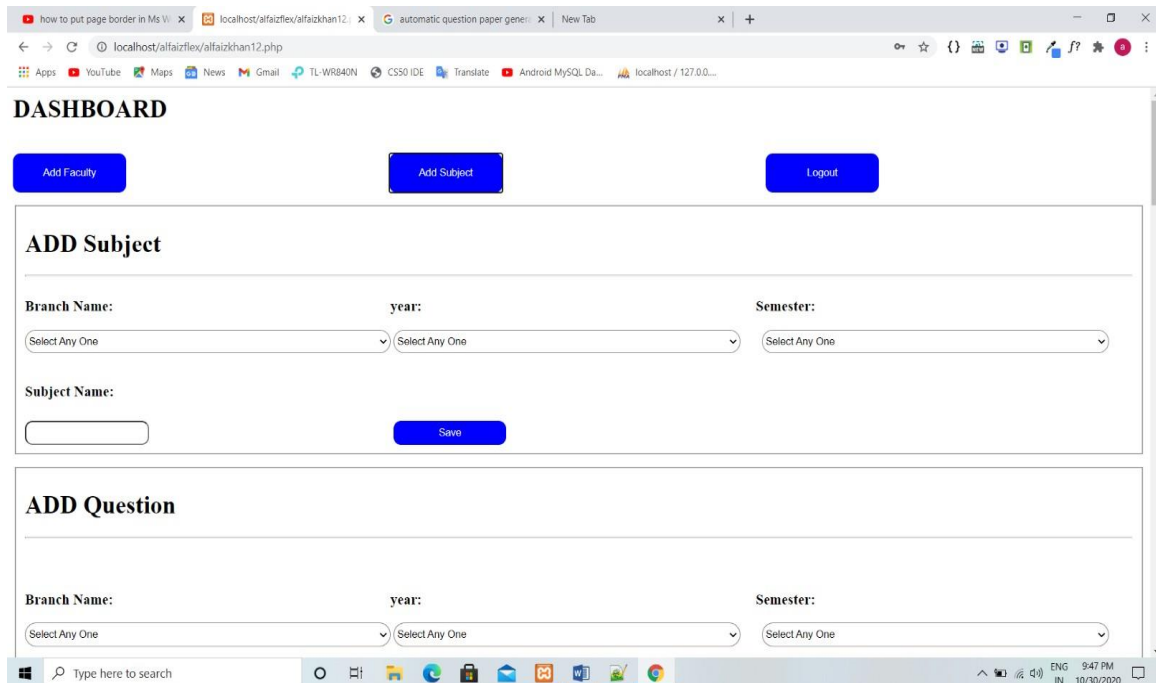

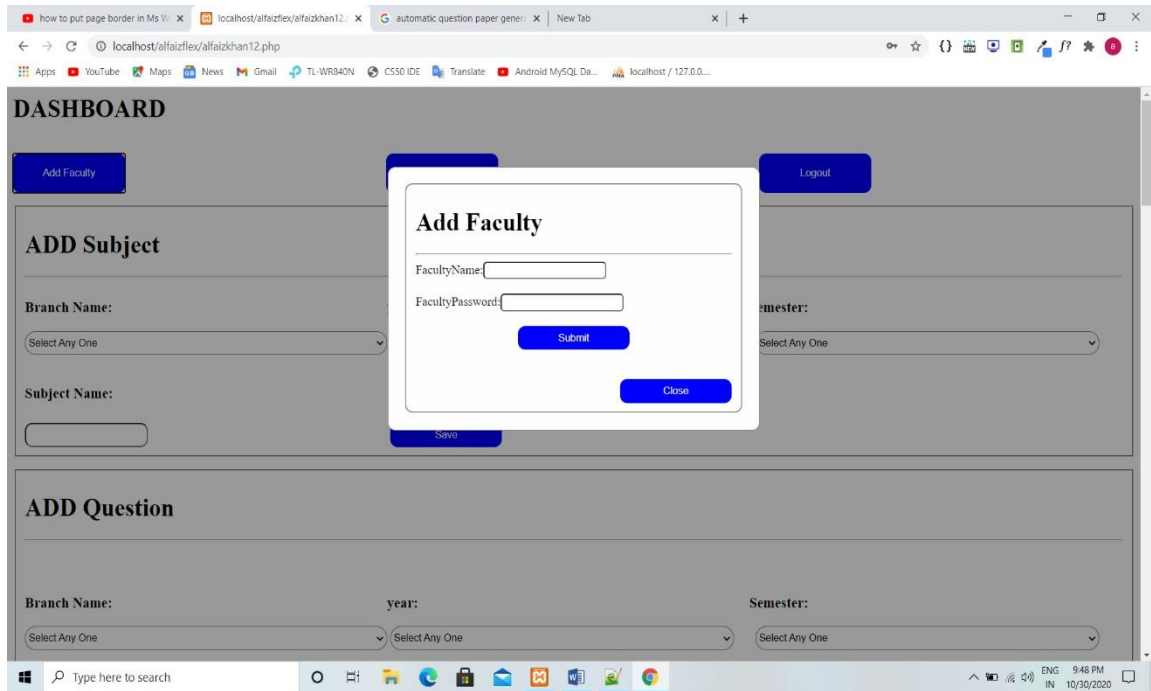

The Project is totally built at administrative end and thus only administrative is guaranteed the access. The purpose of the Project is to build an application program to reduce the manual work for managing the Branch, Course, Subject, Questions. It tracks all the details about the Branch, Course, Subject, Questions.

### 3. Scope

This system is a bunch of benefits from various point of views. As this online application enables the end users to register to the system online, select branch , course , semester and generate question paper easily within very less time.

<b>Paper-based System</b>	<b>Paperless System</b>
Human process	Automated process
Low Security	Higher Security; Encryption
Patterns or repetitions may occur	Totally random and unbiased process
Slow as human labor involved	Faster due to computer based automation

## 4. User Interface.

### Appreciation Letter

This is to state that Alfaiz Khan of class SYCS (Computer Science) has made a software project on automatic question paper generation. The same has been tested in our IT and CS lab. The Information Technology and Computer Science department are going to use the above software from the current semester.

We appreciate his efforts in the above project and we wish him success for the future.

Dr.(Mrs.) Anjum Ara Ahmad
